

MICRODESK ARCHITECTURAL SOLUTIONS SPECIALIST

Dear Colleagues:

I'm the former Director of Digital Design at SOM in New York, as well as former chair of the AIANY Technology Committee. I have **a great opportunity for you to work with some of the best architecture firms on a variety of high-profile projects**. If you have the appropriate skills, I'm looking to have you interview for the position of Microdesk Solutions Specialist.

You'll be a full time professional focused on architectural BIM development, model management, and quality control. This is NOT a temp role, and you will NOT become a job shopper! What you will become is highly paid and highly in-demand!

- You'll face new challenges to grow professionally and personally by providing on-demand support for Revit, Navisworks and all BIM-related architectural workflow issues.
- You'll be on a team of 100+ world-class consultants, discussing BIM issues and collaborating on advanced application development for Construction, Structural, Civil and MEP engineering.
- You'll offer your superior level of wo-manpower - combining your experience in architectural practice and in Digital Design - to deliver high-quality, BIM-driven results.

And, guess what? **You'll work normal business hours** (attaining IDP credits) so you can do other things in your life – all while receiving great personal, financial and healthcare benefits.

As a Microdesk Solutions Specialist, you'll have the following opportunities, unlike any on the market:

- **You'll be joining the client's project team as a full-fledged participant**
- **You'll get to work with the architect, engineer, owner, and CM!**
- **Your level of career-building and project exposure will be second to none!**

As a Microdesk Solutions Specialist, you'll have the following responsibilities:

- Organizing & implementing Revit technology processes for Microdesk's clients
- Maintaining compliance with Revit families, templates, standards, and best practices
- Managing all BIM data exchange throughout the project's life-cycle
- Optimizing BIM project scheduling, quantity take-offs & estimating
- Organizing weekly BIM coordination meetings to identify project issues
- Assessing a team's BIM capabilities and providing the client with an ROI health-check
- Arranging and providing Autodesk BIM training and technical support
- Reviewing BIM / CAD documents for quality assurance & control at critical project milestones

Your qualifications must comprise:

- Advanced Revit, NavisWorks and Digital Design skills to meet on-demand project needs
- Strong design documentation and detailing skills to proactively develop BIM procedures
- Advanced experience in office practices, standards, policies, and procedures
- Basic knowledge of Revit-driven performance, scripting and analysis tools
- Creation of BIM Execution Plans /model mgmt between clients, consultants & CM's
- Experience guiding client teams toward meeting BIM-driven project deadlines

So...

Dive in! Send me your resume. You'll become a project architect with BIM credentials and go places!
